

Install New Toolbar in Vignette Article Editor – PC Users Only

These directions will walk you through installation of a new toolbar in Vignette Article Editor.

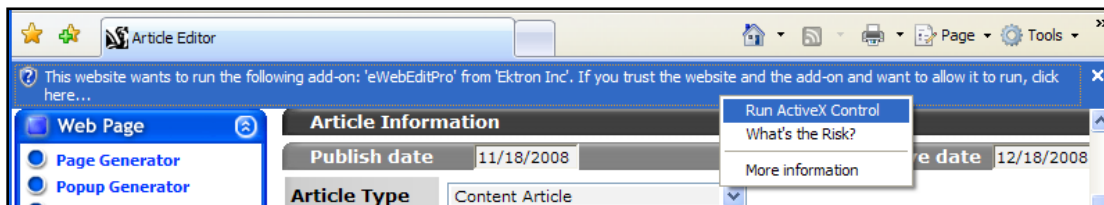

The first time you open an article or create a new article in Vignette, you will be prompted to install eWebEditPro+XML5 with WebImage FX Client. Please follow the below directions to successfully install the new editor.

1. **Open Vignette**
2. Select **Article & Documents**
3. Select **Options > Create New Content Article**
4. A window will open prompting you to install eWebEditPro
5. **Click Close**  to close the automatic installation window. Be careful not to close the Vignette window.
6. **Scroll down under the body of the article** (You may notice the toolbars are missing. This is OK because you are installing a new version of eWebEditPro. Once you install this version, the toolbars will re-appear.)
7. Click **Download Article Editor**
8. When the window opens, click **Run** (If the window does not open, you may have to turn off your pop-up blocker)
9. Go through the **steps to install** the new toolbar
10. Once installation is complete, **if the new toolbar does not automatically appear:**
 - a. **Click Articles & Documents** to take you out of the Article Editor window
 - b. **Click Options > Create New Content Article** to open the editor
11. The **information bar** may appear at the top of the Vignette Window (See Below)

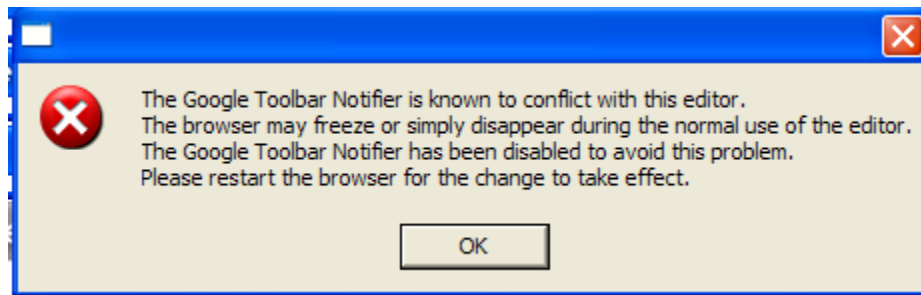

12. Click on the information bar and select **Run Active X Control** (See Below)

Congratulations, you have successfully installed the new toolbar and eWebEditPro!!

Note: If you have **Google Toolbar installed**, the following window will appear:

Click **OK** to **disable the Google Toolbar Notifier**. You might have to:

- Click on Articles and Documents
- Select Options > Create New Content Article

Now the Toolbar will display correctly!
